

group vision® web

■ compliance ■ accuracy ■ speed

■ The most flexible legal entity management and group charting software

Group Vision Web helps organisations comply with internal and legislative requirements and to exchange vital corporate information about the legal group structure in an efficient and consistent way. The application provides a central place to manage and distribute data concerning the legal entities' capital, shareholder and shareholding structure, powers of signature, directors and other representatives.

■ Your advantage

With our software, tracking corporate information and delivering extensive reporting could not be easier. And the result is:

- Legal compliance
- Increased accuracy
- Better monitoring
- Value-added investor relations
- Support for reorganisation and tax planning
- Time saving
- Cost reduction

■ Flexible reporting

A strong feature of our software lies in its unique flexible reporting functionality. A report can be generated immediately and directly from the information displayed on the screen. Users can design, alter and save templates of their own reports, and access them from any place in the system. Additionally, a wide range of standard reports are provided. All your reports can incorporate your company branding, and can be exported to another format, e.g. MS Excel, MS Word, PDF.

■ Accessible on all devices

Developed using the most advanced technology and unique design, Group Vision Web runs equally well on PCs, tablets and smartphones. You can always check the most recent data no matter where you are!

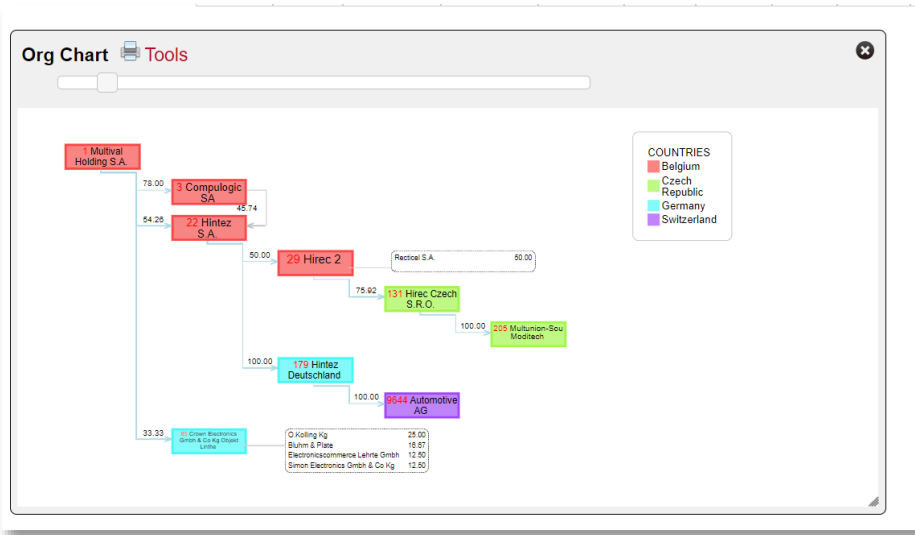

■ Easily configurable

Because our solution is highly configurable and jurisdiction-independent, it caters to the needs of organisations of different sizes, locations and ownership structure. With Group Vision Web you can start immediately, even with limited or incomplete data. We attach great importance to giving the users choice and flexibility to configure their user interface, e.g. having a favourite start-up screen as well as various templates for data input, searching and reporting. The user interface and reports can also be customized by the system administrator.

■ Document and contract management

With the Document Manager module, you can securely attach important corporate documentation to each entity in the database: contracts, articles of association, minutes of shareholders' meetings, excerpts of Chamber of Commerce, annual accounts, etc., and in any file format. Once linked to Group Vision Web, the documents can be made available only to users with appropriate access rights. They can then be sorted and searched upon, and the saved documents can be directly opened and printed.

■ Unrivalled group charting

Our Structure Chart Builder offers unmatched speed, efficiency and user-friendliness. Sophisticated charts, even those including minority shareholdings, are created automatically with just a couple of clicks. No plug-ins and no exporting to drawing tools are required. Structure charts of the entire legal group or a selected country, division, region, etc. can be swiftly displayed and a fully automatic colour filter easily applied, based on selected criteria. Additionally, you can create separate charts per country all in one go.

■ Global security and access rights

The web technology makes it very easy to perform data entry from multiple locations. Security access rights are easy to set up for both data-entry and read-only users. For example, some users may be restricted to edit or to browse data concerning only one region or only certain document types.

■ Additional services

We believe that efficient and friendly customer support is the key to deriving the most benefits from our software. Our software can be configured to meet your needs and objectives. If you are moving from an in-house system or a competing product we can convert the existing data to our application, saving you time and money. We provide training that is tailored to your needs. Our Helpdesk support is highly rated for its pro-active and friendly approach.

■ Hosted or On-Premise

Besides an On-Premise installation, Group Vision Web can be hosted in the cloud. This gives the advantage of having the software installation, security maintenance and upgrade management outsourced. The solution is time- and cost-effective and efficient: updates and maintenance are delivered in a seamless way, without involving your IT department; the database can be accessed from any location by using your standard web browser. Multiple measures of security and data privacy have been put in place to ensure your company data is safe and secure at all times. We use the cloud infrastructure of Microsoft Azure, widely known for its high reliability and strictest security measures. The datacentres, based in the EU, conform to strictest standards and are ISO-certified.

■ Pay-as-you-go option (SaaS)

The hosted solution is available based on an annual subscription model: no perpetual licences have to be purchased, thus no hefty upfront investment is required.

■ Technical information

The recent versions of all standard internet browsers are supported. For both On-Premise and Cloud installation: no plug-ins or add-ons are required. Data can be exported to most common file formats. Single Sign-On functionality is available.

■ About us

For over 20 years Askival Systems has been providing specialised software solutions for legal entity management. Many renowned global and European organisations use our applications to manage their corporate data and documentation. We attach great importance to the continuous development of our tools, in order to make them better and better with every new release.
